A SMARTER, KINDER FOOD FUTURE

AI AGAINST FOOD WASTE

Our prototype: FreshKeep, a smart fridge tracker

Presented by: [Your Name / Team]

Every plate counts.

THE PROBLEM

1.05

billion tonnes of food wasted every single year

Meanwhile 783 million people go to bed hungry. This is not a shortage. It is a problem of guessing, timing and sharing.

Why it happens: we buy too much, cannot see food spoiling, and surplus never reaches those in need.

19% of food reaching consumers is wasted, about 1 in every 5 plates

60% of that waste comes from our homes, then restaurants (28%) and shops (12%)

8–10% of global greenhouse gas emissions come from food loss and waste

~78 M t of household food waste in India alone every year

Source: UNEP Food Waste Index Report 2024 (2022 data)

OUR SOLUTION

AI that sees, predicts, acts and shares

1

SEE

Camera + computer vision checks how fresh food is

Next phase

2

PREDICT

Machine learning forecasts what we will really need

Next phase

3

ACT

Smart tips: use first, discount early, cook this soon

Built in FreshKeep

4

SHARE

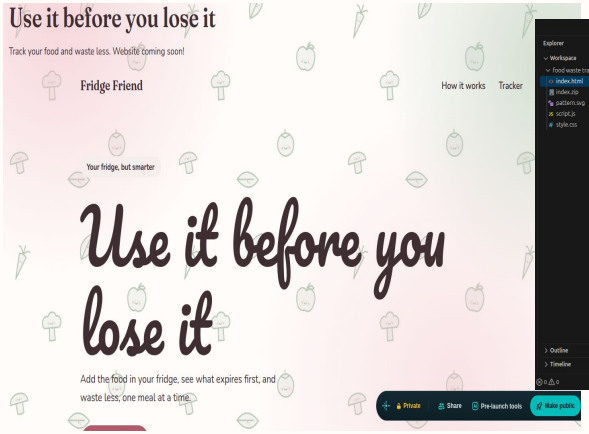

Matches surplus with NGOs, food banks and farms

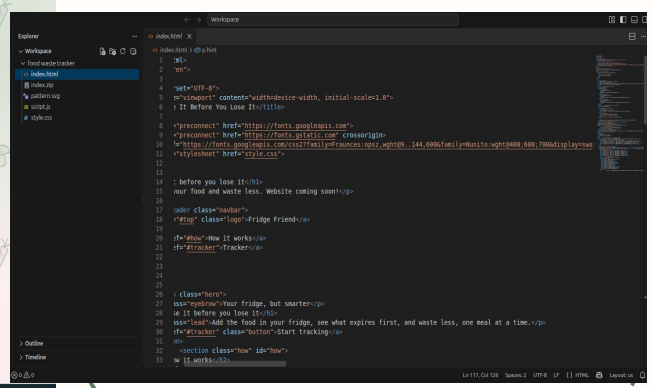

Next phase

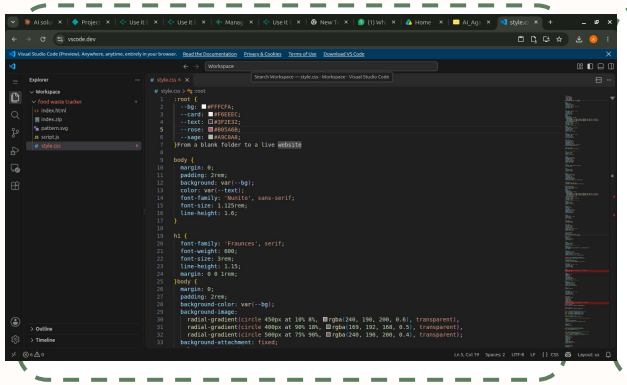

We started with the part people can use today: a tracker that shows what to eat first.

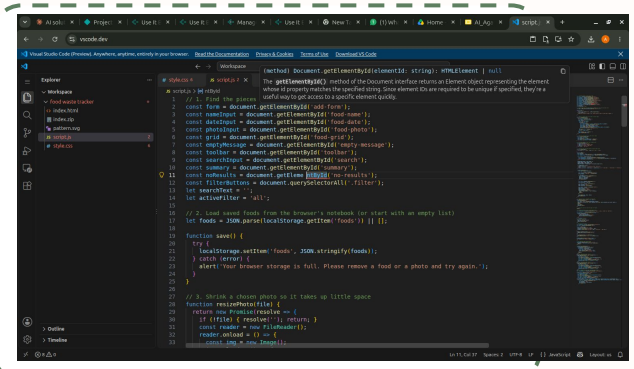

HOW WE BUILT IT, STEP BY STEP

From a blank folder to a live website

1 Design

Soft pink, sage and plum colours, friendly fonts, one-page layout

2 Build the page

HTML gives the page its structure: menu, headline, form, footer

3 Style it

CSS adds colours, rounded cards and animations and the mobile menu

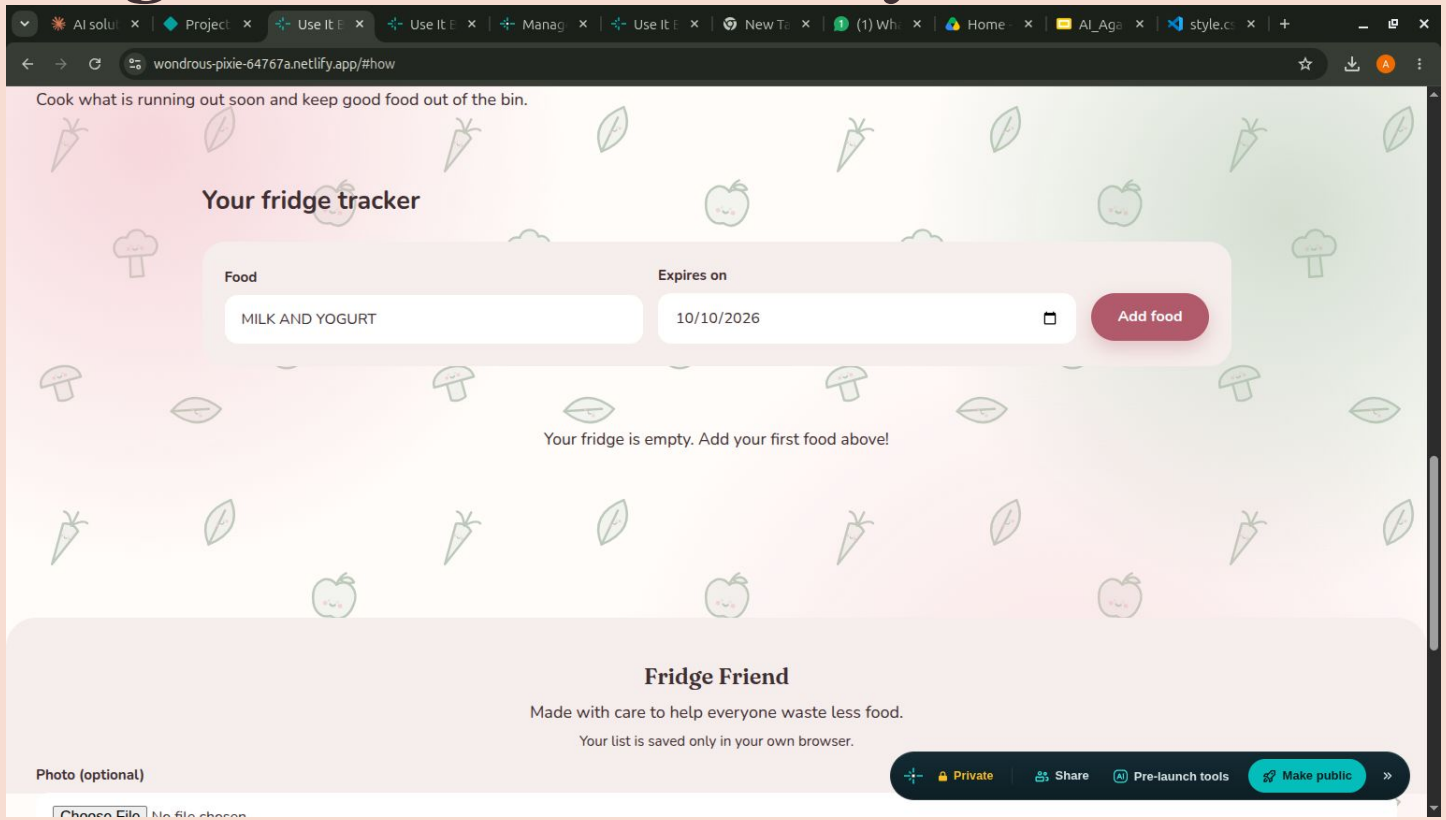

4 Make it work

JavaScript adds foods, counts days left, filters and saves the list

Free tools only: vscode.dev (editor) • HTML, CSS, JavaScript • Google Fonts • Netlify (free hosting)

THE PROTOTYPE: FRESHKEEP, LIVE

A fridge tracker that tells you what to eat first

Colour-coded cards

- Use first
- Soon
- Fresh

- Add foods with expiry dates
- Quick-pick dates
- Food type suggestions
- Photo upload
- Search and filter
- Mobile menu

RESULTS AND WHAT IS NEXT

A working first step, with AI ahead

RESULTS

- ✓ Working prototype, live on a free link
- ✓ Foods sorted by what expires first
- ✓ Works on phone and computer
- ✓ Each person's list stays private
- ✓ Built step by step from zero, with free tools

WHAT IS NEXT

1. AI photo check of freshness
2. Demand forecasting for shops
3. Donation matching with NGOs
4. Goal: 30% less waste in testing

Every meal we save is a person we feed. Thank you!
